

1. Technical description.

The fuse module is intended for dividing power in low-voltage alarm systems (power distribution) that require voltage within the range of: **10V ÷ 30V DC**. It contains two power inputs: a screw connector and a DC 5,5/2,1 outlet and four power outputs AUX1÷AUX4 which are independently secured with PTC 0,3A polymer fuse. An activation of the PTC fuse is indicated by an appropriate LED going out: L1 for AUX1, L2 for AUX2 etc. Additionally, each output is secured by a varistor which protects the PSU and the receivers against surges in the power circuit.

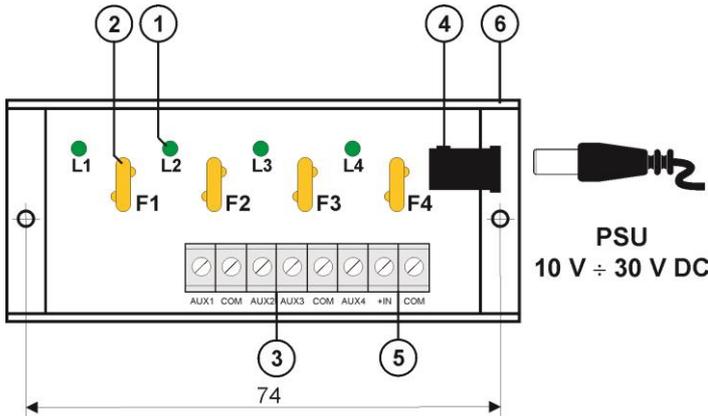

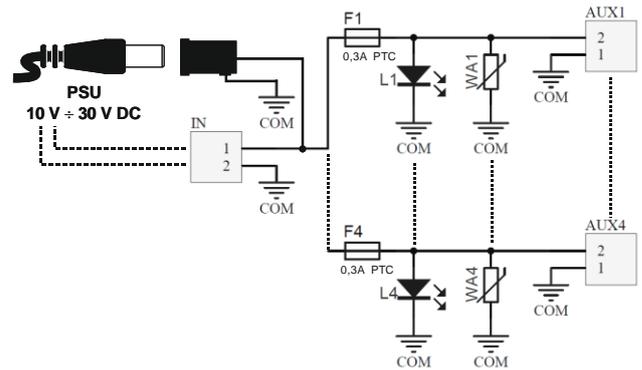

Fig.1. Drawing of the module.

Rys.2. Electrical diagram.

Table 1. Description of components and connectors of the PSU.

Element no. [fig. 1]	Description
[1]	L1 ÷ L4 green LEDs
[2]	F1 ÷ F4 fuses in the AUX (+) circuits
[3]	AUX1 ÷ AUX4 independently secured outputs, common terminal COM (-)
[4]	DC 5,5/2,1 outlet – module's power input
[5]	Screw connector – module's power input
[6]	Mounting strip

* Using power supply unit with too low current efficiency may cause (in the case of a short-circuit at one of the outputs of the module) temporary power loss at other outputs.
